

TruOps Common Language Store

get industry-standard
interconnection quickly
and cost effectively

iconectiv TruOps Common Language is the industry resource that communications service providers, telecom infrastructure vendors and their business partners rely on for identifying, locating, managing and interconnecting network resources. Recognized by international standards bodies and organizations including ANSI, ATIS, ETSI and IETF, the Common Language suite of products includes code sets, code spreadsheets and more.

Companies typically purchase Common Language subscriptions, which provide access to the full product suite. However, for companies with lesser needs, a limited set of products is available through the Common Language Store. This option is ideal for resellers, telecom billing and/or processing companies, regional holding companies, content providers and any other type of company that needs an industry-standard method for low-volume interactions with communications service providers.

How does Common Language work?

7 4 K ? E D J B T

The Common Language Store provides several codes

Common Language CLU Codes

These enable a quick, precise exchange of location information to support interconnection. The Common Language Store provides

whose growing businesses do not yet require the greater value offered by a CLLI Code Set license.

Design Routing (DRC) Codes

These are a three-character alphanumeric code that represents the customer device to which a Design Layout Report (DLR) is electronically delivered by the provider as a result of an Access Service Request (ASR) or Local Service Request (LSR) order.

Entity Company (EC) Codes

These are a two- or four-character alphabetic code that represents the legal entity company name for a company providing communications services as per ANSI ATIS-0300251, Codes for Identification of Service Providers for Information Exchange. An EC typically provides dial tone and local exchange switching of telecommunications services and has at least one wire center. However, other types of companies also receive the code to do business with a trading partner and bid flow-thru processes in receiving an ASR or LSR order.
